Who Uses AutoCAD? According to Market Research: The key factor influencing a company's market is the type of business it is in. As many small businesses have moved to the Web and away from the mainframe computers, the demand for sophisticated CAD programs has decreased. Nevertheless, many CAD users still use AutoCAD, such as architects, designers, engineers, and draftsman. According to Statistics Canada, there were 1.8 million CAD users in Canada in 2012. Additionally, in 2014, the number of Canadian entrepreneurs, small business owners and self-employed people with a CAD-related skill was 718,000, or about 12% of Canada's total population. In Canada, 75% of corporate users are in either manufacturing, architecture, design and construction, engineering, or IT sectors. Also, in the year 2012, 75% of small businesses used CAD software in one form or another. Of those, about half used commercial CAD applications, and the other half used free/open-source CAD solutions.

What are the Benefits of AutoCAD? AutoCAD is suitable for both beginners and experts. The applications provide basic drafting and design capabilities. Allows the creation of different types of CAD drawings. The AutoCAD software is used for the creation of architectural drawings, mechanical design drawings, and industrial engineering drawings. Data exchange and transfer are easy because of the ability of the AutoCAD software to read and write AutoCAD files. The AutoCAD software supports a comprehensive library of tools that can be used to perform the different tasks of a project. AutoCAD is used for computer-aided design. It allows you to design, create, and modify complex 2D drawings. The design is based on Gantt chart-style project management tools. The AutoCAD Software does not involve user training. It is operated via a mouse or a pointing device. AutoCAD is a powerful and feature-rich software application that is used by the following: Architects Civil engineers Engineers Draftsman Land surveyors Mechanical engineers Mining and mineral exploration Painters Property developers Surveyors Transportation consultants The AutoCAD software is ideal for the following: Engineers and scientists Arch

History AutoCAD became available in 1979, along with the introduction of AutoCAD for

Macintosh in 1980. AutoCAD for Windows and AutoCAD for Mac were the first versions of AutoCAD to support an object-oriented approach (previously, it had been a command-line approach), and started a trend of software to include both a command-line and GUI approach. In 1993, after the decision to rename the Autodesk DWG format to DXF, the original DWG format was dropped from AutoCAD and moved to Autodesk Architectural Desktop. The official AutoCAD software transitioned to the AutoCAD R14 family of products for Windows and Macintosh. In 1994, a separate line of professional AutoCAD (now named AutoCAD LT) was released for DOS, Windows 3.x, Windows 95/98/NT/2K/XP, Windows CE/Pocket PC and Macintosh. In 1995, AutoCAD was the first application to support both a command-line and graphical interface. AutoCAD also became the first product of its kind to support networked workflows. This is because of the introduction of the DWG Networking standard in 1995. In 1997, AutoCAD gained Windows NT 4.0 support. Windows NT 4.0 was the first Windows platform to support both a command-line and graphical interface. In 1998, AutoCAD LT 3.0 was introduced for DOS, Windows 3.x, Windows 95/98/NT/2000 and Macintosh. AutoCAD 2000 introduced many new features, such as: Support for several vector formats Support for parametric surfaces Interactively zoomable drawings Support for the drawing of geometry, graphs, and other objects Support for stereolithography Support for DXF2DWG Support for contour routing Support for unlimited page scaling Support for using AutoCAD files on the a1d647c40b

Changes in the structure of freshwater benthic communities during a transition from fine to coarse sedimentation in a Swiss fjord. The benthic community in Gossau (Lake Lucerne, Switzerland) was studied in 1988/89 and again in 1997/98. Both surveys were carried out during a period of shifting dominance of the fine-grained Quaternary sediments, which had been progressively covered by coarse sediments. The main structural change occurring in the community between the two surveys was a significant reduction in the abundance of polychaetes. By contrast, the decline in abundance of the common amphipod Crangon crangon which was very pronounced at the first survey, was nearly compensated by an increase in abundance of the new species Hyalella katharina. Whereas only 8 species were significantly affected by the changing sediment load, 24 species were considered to be sensitive to some extent. In each of the two survey periods, the community structure was dominated by either soft bottom species or coarse-sediment species. The proportion of species preferring coarse sediment was greater in the second survey period. Because no sediment type was dominated at both periods, the data suggest that a favourable environment for crustaceans is a gradual transition from fine to coarse sediment.

The City of Thunder Bay wants to send more money back into community programs and initiatives. The region's new city council will be tasked with coming up with a plan to do that. On Monday, the new council voted to allocate \$1 million for three priorities — climate action and adaptation, economic growth and prosperity, and skills and employment. The city estimates these investments will deliver an annual return of \$4
