Fport Download [Win/Mac]

Start: Fport For Windows 10 Crack -f Stop: Fport Crack Mac -h Help: Fport 2022 Crack -? The Fport Activation Code application was designed to be a small tool that reports all open TCP/IP and UDP ports and maps them to the owning application. This is the same information you would see using the 'netstat -an' command, but it also maps those ports to running processes with the PID, process name and path. Fport can be used to quickly identify unknown open ports and their associated applications. The program contains five (5) switches. The switches may be utilized using either a '/' or a '-' preceding the switch. The switches are; /? usage help /p sort by port /a sort by application /i sort by pid /ap sort by application path Fport Description: Start: Fport -f Stop: fport -h Help: Fport -? Fport 13. Version 1.0 14. Licensed to the Apache Software Foundation (ASF) under one or more Contributions from 2010 by Vincent Guenzi on Jul 27, 2010 . 100% free. Fport Activation

-p PID print process id for given PID. -a application print the app with PID given -i application print application name for given PID -a application print the app with PID given -ap application print application name for given application KEYMACRO Description: /? print usage help /? -help print this help KEYMACRO Description: /p print sorted results by ports KEYMACRO Description: /a print sorted results by application KEYMACRO Description: /i print sorted results by pid KEYMACRO Description: /ap print sorted results by apppath KEYMACRO Description: /? print usage help Key: macro Description: (2) The KEYMACRO is used to define a macro or command. The macro can then be used in the main function. The Key is defined as 'KEYMACRO Description:'. (3) Each 'Description' may contain as many spaces as you desire. The repetition of the 'Description' is not required, however, in the case of the 'Application' macro you can use 'Description' twice to define 'PID' and 'Application' both as the same thing. For example; KEYMACRO Description: (4) A KEYMACRO has four (4) options: (a) PID - to print the process id (PID) associated with the specified port (b) Application - to print the process id (PID) and application name (c) PID and Application - to print the process id (PID) and application name (d) Application Path - to print the application name and path. Macro: PID/Application/PID/Application/Application Path (5) The Application Path is only required when printing Application Number (6) The KEYMACRO is terminated with a semicolon. (7) The KEYMACRO must be given in one of the first two lines of the program. EXAMPLE: KEYMACRO Description: Key: PID/Application/PID/Application/Application Path */ /* PROGRAM: fport VERSION: 1.0.5 KEEPER: *** KEEP THIS COPY, AND UPDATE THIS ONCE A DAY *** /* KEEP THIS COPY OF FPORT (DONT EDIT) CHANGELOG Revision 1.0.5 - 2 2edc1e01e8

Fport Crack+

The Fport program is a small, fast, portable program that displays a list of open TCP/IP ports and maps them to the owning application and other information. This is the same information you would see using the 'netstat -an' command, but it also maps those ports to running processes with the PID, process name and path. The output format is fully customizable and can be customized using either an ASCII or HTML format. The application may be run as a standalone tool, or it may be incorporated into other applications. The Fport application is a simple application that should run on any system that has the NetBIOS names installed. The Fport application is designed to be a small tool that reports all open TCP/IP and UDP ports and maps them to the owning application. This is the same information you would see using the 'netstat -an' command, but it also maps those ports to running processes with the PID, process name and path. Fport can be used to quickly identify unknown open ports and their associated applications. The program contains five (5) switches. The switches may be utilized using either a '/' or a '-' preceding the switch. The switches are: /? usage help /p sort by port /a sort by application /i sort by pid /ap sort by application path Fport Description: The Fport program is a small, fast, portable program that displays a list of open TCP/IP ports and maps them to the owning application and other information.
