If you don't know what software you need, or you just don't know which sort to buy, then you need to buy software from a QA professional. A QA personnel is also your best bet if you want to get the most out of the application. Photoshop and Lightroom are two products in the same market. This was the case even before the release of the Creative Cloud; as a Photoshop user, you already had access to Lightroom. The two products work in tandem, and a key benefit that they share is that they are both capable of exporting to camera RAW. Any RAW import will result in the same image quality as a high-end camera, or even a RAW image from a higher-end camera. Whether you save as JPEG, TIFF or other formats, they will all import at the native resolution. This means that Photoshop loses out when it comes to size, but so do most other formats. You aren't going to have this problem if you choose to use the high-end camera RAW formats in Photoshop, and exporting this way can also improve image quality, depending on the file format, and the users that you employ. This is the reason I use Lightroom, simply because of the ability to export to a RAW format. Lightroom does allow you to import Photoshop files that are saved as RAW, which is useful if you use a RAW converter. It does not mean that Photoshop is a redundant program, however, only that editing in Lightroom is distinctly faster. I love Photoshop and use it at least four hours a day. The best software I ever worked with is Blackmagic Design's DaVinci Resolve 12. It is still a long way from Photoshop, but it does pretty much everything Photoshop does and more.

Many photoshoppers may know Adobe Photoshop that supports simple shapes like squares, freeform, ellipses, arcs, and other shapes. When we render an image in Photoshop, only pixels remain and the shape gets flattened. But thanks to this feature, we can manipulate and change the shape of an image to make it into a freeform, square, rectangle, rotated rectangle, ellipse, etc. from a simple rectangle. When opening an image in Photoshop, it takes a lot of time to load the file. It is mainly because of the number of layers and layers which are stacked together. This has always been the problem with conventional Photoshop. But it is now well addressed with Adobe Photoshop. Users can always load the image by pressing the Cmd + Spacebar that brings up the loading bar. It does not take that much time to load an image. Also, you can use the **Auto Save** option to save the image every hour. Also, it saves the last 10 images by default and it is updated at the time of saving. The history feature of the Photoshop allows us to delete, merge, split, move, or duplicate layers. It does not erase the original edits on the layers. We can go back to any previous state by restoring or erasing the last history state that we worked on a certain layer. We can also "clear" the history of a layer by pressing Cmd + Z or Cmd + Shift +Z on the keyboard. Encrypted documents are required to be password protected. Here you can protect any document that you have using any password. The password can be completely changed or added while exporting the original document.
