Most of this time, however, was spent on manual and I.B.M. operations, . drillers penetrated to a depth of more than 4,000 feet, finally reaching the underlying basalt. This large cave is located in central Peru. This project is called Titicaca Cave, and it is located in the National Park of Tiwan Cusco, Peru, where the highest mountain peak in the Andes is located. Because of its shape, it looks like a hole in the wall. However, it is actually a large cave. Titicaca Cave is one of the most visited in the country. To get access to this place, you have to pay a visit fee of \$25, which, as the BBC notes, is quite a high price.
