Features AutoCAD is a type-in, rule-based, and parametric CAD application. Parametric means that the user can establish a model on the computer screen and then move and rotate the object (building, device, etc.) as desired. You can rotate the object even after the drawing has been saved in the default drawing format (DWG). You also can translate an object (move it) as desired. The parametric model allows the user to create a building that can be expanded to any desired size. It is flexible in that it allows the user to design different types of buildings and modify their size, shape, and position easily. You can even change the orientation of the building to make the building more aesthetic. You can type in the dimensions, including the width, height, depth, and area, of the building. Dimensions are automatically taken into account when modifying the building. For example, you can type in 20 feet for the height, but if you make the building's height 20.5 feet, then the dimensions are automatically adjusted. The width can also be type in. The building's area can be type in as well. The area of the building is automatically adjusted when changing its height and width, and vice versa. A built-in feature allows the user to type in a base area (square footage) of a building. The base area represents the minimum area that the building must occupy. The building can be of any shape. You can draw a building with rounded corners. If you type in the base area of the building, then the minimum area of the building is specified. The building's dimensions can be changed freely. You can change a dimension by simply typing in the new value. For example, you can change the base area (of a square building) by typing in a number between 100 and 400. The computer reads the number and then changes the building's base area to that number. Built-in, graphical filters automatically apply effects to the building, such as lighting, shadows, highlights, coloring, and perspective. You can easily modify the appearance of the building by clicking on the various "brushes" used to apply the effects. AutoCAD uses the building block system, which is similar to a tiling system used in building construction. The building block system allows the user to change the shape of the building to create different shapes, as well as to create new shapes by expanding the existing ones. The block system can be expanded

EXCEL support AutoCAD supports the Interop.Excel object library which is included in AutoCAD and can be used to add Excel functionality to a drawing. The AutoCAD Javascript Tools for Excel provide export and import of drawings to and from Excel. In a 2013 comparison of BIM and Excel, AutoCAD was compared to several BIM applications for the handling of Excel files. The review found AutoCAD the easiest to work with, "capable of handling most Excel data structures while maintaining the native layout of the Excel spreadsheet. There is also the flexibility to customize how the data is handled." Project management and collaboration AutoCAD is a leading 3D-based product that supports automated design and engineering collaboration on complex projects. AutoCAD is the world's most frequently used BIM

application, used by over 95% of Fortune 500 companies. AutoCAD users typically use 2D drafting, 3D modeling, and 3D coordinate systems to keep track of project content. Release history AutoCAD 2008 AutoCAD 2008 introduced several significant improvements, including 3D modeling, graphical import of XREF data, the ability to define custom layer names, improved 2D drafting tools, improved code folding, and a new Graphical User Interface. The new XYZ 3D environment was aimed at increasing productivity, especially for those modeling and designing for Internet delivery. A new layer system allows layers to be named to represent unique subsets of the CAD file. It also allows the creation of multiple versions of the same layer, either as separate layers or as separate copies of the same layer. A new cross-reference tool, XREF, allows drafters to reference one drawing from another. The 2D Drafting tools have been enhanced with the ability to perform multiple operations on the same selection without the need to copy the selection. AutoCAD 2009 AutoCAD 2009 introduced a new feature for CAD professionals to make 2D and 3D drawing data interoperable. XREF, or X Referencing, is an import and export format for 2D and 3D drawings that can transfer CAD information and make it available on any CAD system. XREF objects are typically placed within the 3D environment of a CAD application, such as AutoCAD, to provide both 2D and 3D design information. AutoCAD 2010 AutoCAD 2010 was the first product to include the new Appdev.net API, which provided 5b5f913d15

Lol @ this thread title. My only hope is that it is an inside job. Originally Posted by Bolsterup Can you find a single one of the 3,000+ people who didn't benefit from a failing education, one that didn't manage to get a job with a minimum wage of \$9 per hour?“You can't become a mother if you haven't got a uterus,” is a line from one of the most astonishing feminist documents of all time: The Wages for Housework Committee report. It was published in London in 1943 by the International Ladies' Garment Workers Union, and demands that women should be paid for the work they are required to do in the home. The report is a model of what we might call sustainable radical feminism. The ILGWU had already introduced “a weekly wage of \$20 for half-time employment, and of \$25 for full-time employment, for women as well as men” in 1938. These rates became the minimum for their members and were improved in the years that followed. But, as its name suggests, the report was really about what it called the “double burden”: “The burden of child-bearing and of bringing up a family falls on all women,” it said. “It falls on those who are fortunate enough to have any, and, in the case of the large majority of the women in the world, it falls on those who have none.” It was a bold statement about women's roles and responsibility. In the report, its authors recommend that women be given the right to “decide freely as to the number, spacing and frequency of their children”. This is a radical demand. The fact that women must give birth, and that children take over most of their parental responsibilities as soon as they are born, is seen as a great injustice. Back in 1943, it was still common for married women to have to work at all. In the UK, in the 1940s, we did not have the concept of paid maternity leave. The ILGWU reported that many working mothers felt that their employers were no better

Presentation: Color and graphics tools let you more easily create stunning visuals for your presentations. Draw objects, modify or replace imported graphics with quick and easy tools. (video: 2:35 min.) Navigation: Find what you need faster and more efficiently. Bring up the DesignCenter or Navigator or the Object Browser directly from anywhere in the application. Partner tools: Work with others without the hassle of exporting and sharing parts as separate files. Use LinkParts to allow multiple users to work on one drawing. Share SketchUp models from within AutoCAD directly. Or design parts that can be shared across multiple CAD applications. (video: 5:55 min.) Partner licensing: AutoCAD is available for both On-Premises and as a cloud-based service. Either way, you will be able to collaborate on your work and share designs with others, all in a familiar cloud-based environment. (video: 4:20 min.) 360-degree inspection: Work with unrivalled visibility. Take the CAD space anywhere with VR. I am 9 years old and I have been playing truant for the last 4 days, but I am finally giving up. My teacher said that this isn't the best thing to do and will probably get me into some trouble, but I don't care, I just want to play my XBOX 360. I decided to stop being a worrywart and focus on my hobbies instead. I have been focusing on my hobbies for the last few days, but I don't want to focus on them just yet because I have so much more to do. I want to think about my XBOX before anything else. I have decided to not care about the problems that my family or my teachers have and that I just want to play my XBOX. I will enjoy what I do and I am not focusing on what will happen after I am done.
