This book was originally published in December 1996 and has already undergone two major revisions. All new material has been carefully researched and includes: additional test environments, an expanded scope of software technologies, multiple testing methodologies, and an expanded chapter on test planning and its relationship to requirements. This book is an expanded, updated, and revised edition of the bestselling "The Art of Software Testing", published in 1994. The programming skills needed to produce a test automation application are covered in-depth. Rex Black has been involved in the software testing field since 1985, when he joined a testing consultant firm in Austin, Texas, to contribute to the testing of a small internal system written in Smalltalk. In 1990, he was hired as a QA lead for the software development project, Mac/e, where he was responsible for QA for Mac/e version 2.8.3. In 1992 he joined Microsoft to work on the Pivotal/Microsoft Win32 operating system. Since then he has held various testing positions in the company, including Microsoft's NT Software Group, Windows Hardware Engineering Lab, Windows Security Engineering Group, and Windows Server Engineering Group. After his time at Microsoft, he came back to Austin, Texas in June of 2000 and formed AltaVista, Inc., a small consulting firm that helps clients with Windows- and Unix-based software. He holds a Bachelors degree in Computer Science with a focus in Artificial Intelligence from Texas A&M University, an M.S. from the University of North Carolina at Chapel Hill, and a Ph.D. from the University of Texas at Austin.
