5 Cheap Photoshop Alternatives Microsoft Windows offers a free application called GIMP, a good alternative to Adobe Photoshop. However, GIMP does not include all Photoshop features. For this reason, we recommend that new Photoshop users use it as a learning platform. To quickly add new features to GIMP, you can create a new Photoshop plug-in that adds a new feature. Adobe Photoshop is certainly one of the most popular image editing applications there is, but did you know that there are five cheap

alternatives to Photoshop? Not only are these five cheap alternatives to Photoshop, they are also the top five online image editing applications.

Q: What does it mean to charge a capacitor? I'm working on a project, and I need to know what it means to charge a capacitor. A: Charge is accumulation of a specified amount of electric charge on a capacitor. For example, in the first image you provided, Q1 and Q2 are making a connection to the inverting input of the op-amp. The output of the op-amp is not connected to anything. Therefore, the inverting input of the op-amp is held at about  $(2V) + (2V) + (5kV) = (7V) = \text{Volts}$ , which is the input value for the op-amp and the op-amp will charge Q1 and Q2. The second image is a bit more complex. The capacitor is not charged but is at 0V. The negative terminal is connected to 0V, the positive terminal is connected to (2kV), and the inverting input is held at the input value that is applied to the noninverting input, which is 2V. The third image is all the same. The capacitor is charged and the positive terminal is connected to 5V, the

negative terminal is connected to 0V, and the inverting input of the op-amp is held at 2V. There are a few more things to note here. First, there is no current flowing in or out of the capacitor. The energy that is stored in the capacitor is transferred back to the op-amp as the input value. Second, just because the capacitor is charged at one time, does not mean that it will be held there forever. Third, while the capacitor is charged, it is not holding a charge of +5V. If it did, the capacitor would be destroyed by shorting out. (As always, please double check the electrical symbols that I used here before using them in a circuit. A capacitor symbol should not be used with negative polarity, but many of the symbols used in electrical circuits are incorrect. Also note that an actual capacitor is a box with two "electrical plates".) Q: How to trigger a video callback from a user script I have a site where the user needs to select a video for a background image. I'm using to make this selection. The user clicks a link,

Sep 29, 2012 By Jeff Fizdale For the Los Angeles Lakers, there is no easier way to lose a game than to play it the way they did during the first 12 minutes of Sunday's loss to the Memphis Grizzlies. Their defense failed to make a stop on the Grizzlies' first field goal and for the duration of the first quarter, they looked out of sync on both sides of the floor. In the past, the Lakers have had problems getting stops on fast-breaking teams, and that was definitely true of their matchup against the Grizzlies, who had gone 8 of their last 10 games without being held below 50 points. In the first quarter, Memphis scored 16 points, and two of them were layups that came directly out of the Grizzlies' fast-break offense. In the second quarter, Mike Conley and Pau Gasol did their best to keep Memphis to below 50 points, limiting the Grizzlies to a season-low 16 points. Memphis came into the game with a team-best 129.9 points per 100 possessions, so when you added the Lakers' struggling defense to that statistic, it was clear the game was in trouble. As

---

the Laker defense struggled, Bryant and the offense struggled too. Bryant had a miserable night with just 10 points on 3-of-8 shooting. For Bryant, the low shooting percentage was a problem, but the lack of production from his teammates was also concerning. Kobe had seven assists in the game, but not one of them came after a Lakers' fast break, and he had just five points. Bryant and his teammates struggled to start the game and that had a direct effect on the rest of the Lakers' offense. They were unable to get stops on defense and as a result, they weren't able to get the offense in rhythm. If the Lakers can't get stops, the offense is not going to be effective. On a night when Bryant's Lakers struggled on both ends of the floor, the coach will have to evaluate what went wrong. Is it related to the Laker's lackluster defense? Is it related to the team playing without a set starting lineup? Is it related to how the team looks when their leaders don't play as hard as they should? Or is it just a flu bug for the Lakers? I've been asked at various times this season if the Lakers have more talent

than they are getting on the floor. On this night,  
I'm going to ask
