It's not available in Live Photo Editing, but it is available in the Curvature Map and Puppet Warp tools. The Small Scene Merge tool is now available in the Adjustment Layer window to apply effects to the selected part of an image. The new version also finds strokes with the Magnetic Lasso tool as well as the Rectangular and Elliptical selections. The new version supports the RAW files as well as JPEG files. One of the most interesting new features is the ability to export multiple layers with an.abr file. This native file format along with the.ps-abr file was designed for sharing layered Photoshop file formats without losing any of the file structure. In addition, Adobe has added four new presets for beginners, five new color facepalms, and a photo lab preset. Adobe also offers tutorials for many aspects of the program. These come with links to the Adobe site, and a tutorial is always posted when new tutorials are added. This is a free service so you can try it out before you upgrade. The Adobe Edge allows both user and student access to these tutorials, which you can also try at Adobe.com. Of course, there are also self-paced lessons that complement the Edge learning hub. The pre-release bugs include a relatively high memory usage and some difficulty exporting a compressed version of a layered PSD file.

To make sure the end of the year 2014 is not too late, I will announce the release by the end of the first quarter. Without a clear path, it will be a bunch of work, quite a challenge. As far as the work of the CS department, we want to be your beacons at hand and show you the way.
