This game has 3 modes: exploration, searching and racing. In the exploration mode you should pass all the main points, gaining scores for passing quickly. In the search mode, you should find 8 blue feathers within 3 minutes. Each feather will bring you scores that will be maintained if you manage to find all the feathers in the given time. In the racing mode you need to finish the first, overpassing your competitors. Collecting the green feathers you will increase your speed for a while and gain the scores. The scores will be saved only in the case if you win the race. The game title is "Eagle Flight" and the game author is Xhevad Zetli, a skilled web developer. You will see in the game files that the game is 100% improvised. It has no commercial intent, the only purpose to make this game. Please feel free to use it or modify it for your own purpose. The software used in game is Html 5, Javascript, Java Script, allcharts, and jquery. My only purpose is to make a fun, simple and enjoyable. With this attitude I just like to make a good game. Collect the gems that you can see on the road and jump from one platform to another by touching the roots, otherwise you will die. Jump, touch the platforms and jump again! 8) Leap of faith: The first VR platform game! Help the fairy in order to avoid falling down and touch the pillar as fast as you can. In this amazing game, you will travel along a real road with a real car, even the fairy will not be able to prevent you from crashing! Your goal is to reach the finish line with a high score and help the fairy. Avoid enemies, gates, crashes, obstacles and get to the finish line. You are the pilot, make sure to hold the steering wheel well and avoid crashes with the pillars! You will need to unlock new cars, improve your car with power-ups, or buy it with the money you earn during the game. 9) Angry Bird VR: The perfect game for everyone Help the avian to collect the eggs. In order to do so, you should touch the eggs in the path with your finger. You should avoid

## **What's new in Equilibrium VR:**

**with MODEL Architecture Update July 2017: MODEL is still in beta and is currently in the process of being rolled out. Many of the functions are still missing and it is recommended you contact the development team to get more information about this. Set up your virtual environment Before you start using MODEL you need to install a few programs. The same requirements for ReactVR seem to apply, except you should use node.js instead of python: sudo apt install -y nodejs npm You can also install these packages from the Ubuntu software center, although you might need root permissions:**
